EXPERIMENT 1: KNOWLEDGE REPRESENTATION USING PYTHON

Aim:

To represent facts about a student using a Python dictionary and display the stored knowledge.

Software Required: Python 3.x

Procedure / Algorithm:

1. Create a dictionary containing student attributes.
2. Traverse the dictionary using the items() method.
3. Display each attribute and its value.

Program:

```
student = {
    "name": "Arun",
    "department": "CSE",
    "course": "Python Programming",
    "year": 2
}

print("Student Knowledge Representation")
for key, value in student.items():
    print(key, ":", value)
```

Sample Input:

Predefined facts:

- Name = Arun
- Department = CSE
- Course = Python Programming
- Year = 2

Expected Output:

```
==== RESTART: C:/Users/saimr/AppData/Local/Programs/Python/Python312/KE-1.py ===
Student Knowledge Representation
name : Arun
department : CSE
course : Python Programming
year : 2
```

Result:

Thus, knowledge was represented as structured facts using a Python dictionary and displayed successfully.
