EXPERIMENT 3: KNOWLEDGE-BASED COURSE RECOMMENDATION SYSTEM

Aim:

To recommend a course using a small knowledge base and decision rules.

Software Required: Python 3.x

Procedure / Algorithm:

1. Read the student's area of interest.
2. Compare the interest with predefined conditions.
3. Display the recommended course or a fallback message.

Program:

```
interest = input(
   "Enter your interest (AI, Data, Web): "
).strip().lower()

if interest == "ai":
   course = "Artificial Intelligence"
elif interest == "data":
   course = "Data Science"
elif interest == "web":
   course = "Web Development"
else:
   course = "No matching course found"

print("Recommended Course:", course)
```

Sample Input:

Enter your interest (AI, Data, Web): AI

Expected Output:

```
>>
==== RESTART: C:/Users/saimr/AppData/Local/Programs/Python/Python312/KE-3.py ===
Enter your interest (AI, Data, Web): AI
Recommended Course: Artificial Intelligence
>>
```

Result:

Thus, the system used stored knowledge and rules to produce a course recommendation.
